

16. UPDATING SYSTEM FOR PASSWORD FILE

PAJ 00-68-76 03189852 JP NDN- 190-0072-9208-0

INVENTOR(S)- JUNICHI, YAMAMOTO

PATENT APPLICATION NUMBER- 01330857

DATE FILED- 1989-12-20

PUBLICATION NUMBER- 03189852 JP

DOCUMENT TYPE- A

PUBLICATION DATE- 1991-08-19

INTERNATIONAL PATENT CLASS- G06F01500

APPLICANT(S)- FUJITSU LTD

PUBLICATION COUNTRY- Japan

PURPOSE: To give priority to perform log-in to a user using a computer everyday higher than that of a user using it sometimes by registering the registration of the user to be used or using again on the forefront of a password file when performing the log-in, log-out, or in log-in.

CONSTITUTION: An individual information take-out part 1 takes out individual information designated by the password file 2 when performing the log-in, and writes it on the forefront of a temporary file 3. A general information take-out part 4 takes out the information other than that of a logging-in user from the password file 2, and writes it on the temporary file 3 so as to be added on the information written at the individual information take-out part 1. A switching part 5 sets the temporary file 3 as a new password file. Then, when the log-in is performed, the registration information of the user to be used or using in log-in or the log-out is registered again at the forefront of the password file 2. Thereby, it is possible to shorten a time required for the log-in for the user with high frequency in use.
